**Model 4000 - High Speed Metering Transplanter**

A Model 4000 4-row was used to plant these fields with over 11,000,000 celery plants using the #080A Speedling trays. The Model 4000 shown above includes optional carousel and cushion seat.

The Model 4000 Metering Transplanter is designed to provide the giant leap in productivity that growers using a cell-type tray system have been looking for! Only one person feeds the metering cups, yet speeds are greater than regular two-person units. No skilled operators are required as the metering unit places the cell uniformly in the soil and determines its spacing and depth automatically. The FLOAT WHEEL DIRECT DRIVE option gives accurate spacings, while it firms and smooths the soil and lets the units float independently. These characteristics make the Model 4000 FAST, EFFICIENT and EASY to use (Patented).
